

Beyond ancient monuments: remote sensing for risk monitoring, environment and landscape characterisation

Nicola Masini & Rosa Lasaponara

n.masini@ibam.cnr.it

lasaponara@imaa.cnr.it

This session invites papers that explore the role of remote sensing approaches in addressing issues in the wider sphere of landscape studies, ranging from broad-brush characterisation, to integration of archaeological concerns with management of unstable landforms and environmental and conservation issues. These connections are vital if the place of the historic environment is to be understood in the wider context of landscape management advocated, for example, by the European Landscape Convention.
